Chapter 1 Biology practice test

Multiple		oice etter of the choice that best completes the statement or answers the question
1.		quirrel and an oak tree are both examples of individual
		genes
		organisms
	c.	cells
		ecosystems
Organisi	n is	a living thing. Page 5
2.	Life	e's basic unit of structure and function is the
	a.	gene
	b.	cell
	c.	organism
	d.	species
Page 6		
3.	Eac	ch distinct form of life or type of organism is called a
	a.	cell.
	b.	domain.
	c.	system.
		species.
Page 7 4.	a. b. c.	ganizing similar species into larger groups is called natural selection homeostasis classification adaptation
Page 8		
		like the members of domains Bacteria and Archaea, the members of the
domain I	Euka	
	a.	are unicellular
		are very small
		have nuclei
	d.	are made of cells
Eukaryo	tic c	ells contain nuclei that separate DNA from the rest of the cell. Page 9.
6. is called	The	e process by which organisms keep their internal conditions relatively stable
	a.	homeostasis
	b.	evolution
	c.	reproduction
		photosynthesis

Homeostasis internal stability or steady state maintained by the body. Page 16

7. What is the term for a localized group of organisms belonging to the same
a. biosphere b. ecosystem c. population d. environment
Page 17
8. Which list represents the levels of organization in a multicellular organism from the simplest level to the most complex level? a. tissue, cell, organ system b. organ system, organ, tissue, cell c. organ, tissue, organ system d. cell, tissue, organ, organ system Page 12
 9. Which organizational level includes all of the other levels? a. biosphere b. ecosystem c. organism d. cell The biosphere consists of all parts of the planet that are inhabited by living things. Page 4
10. Which of the following statements best explains why birds fly south for the winter? a. Living things respond to their environment. b. Living things maintain internal balance. c. Living things are made of cells. d. Living things are based on a universal genetic code.
Page 15
 11. An organ system is a group of organs that a. are made of similar cells. b. are made of similar tissues. c. work together in performing a major body function. d. work together in performing all the functions in a multicellular organism.

Completion

Complete each sentence or statement.

12. **DNA** is the chemical responsible for inheritance – the passing on of traits from parent organisms to their offspring.

Page 14

13. Plants use water, carbon dioxide, and sunlight in the food-making process called **photosynthesis.**

Page 14

14. Cells without **nuclei** are called prokaryotic cells.

Page 9

15. **Heterotrophs or consumers** are organisms that eat food made by producers.

Page 15

16. An **adaptation** is an inherited trait that helps an organism survive and reproduce in its particular environment.

Page 17
